1000 Contact List Introduction

When an oil spill occurs, the waterway is typically closed to marine traffic for an undetermined time. The waterway closure has a significant impact to the marine transportation system and economy. While safety and protection of life, property and the environment remain the priority, there may be a point in the response where limited commercial vessel traffic is authorized by the Captain of the Port/FOSC to move through the oil impacted area. The establishment of commercial vessel decontamination sites to clean these oil impacted vessels at strategic exit points is an important strategy to facilitate commerce while mitigating further impact to the environment.

1100 List of DECON Sites

This list includes sites that may be used for commercial vessel decontamination operations. Approval from the owner and/or operator is needed prior to the establishment of a site. The ICS-204 format for each DECON site provides key information such as point of contact, map and water depth.

Below are the links to the Predesignated Vessel Decontamination Sites:

1. Argos Ports Houston
